Intersection of two regular language is regular
Given: $\mathrm{L}_{1}=\left\{\mathrm{a}^{\mathrm{m}} \mathrm{b}^{\mathrm{m}} \mathrm{c} \mathrm{a}^{\mathrm{n}} \mathrm{b}^{\mathrm{n}} \mid \mathrm{m}, \mathrm{n} \geq 0\right\}$
If $\mathrm{n}=1\{\mathrm{a}, \mathrm{b}, \mathrm{c}, \mathrm{a}, \mathrm{b}\}$ not regular $\mathrm{m}=1$
If $\mathrm{n} / 1 \mathrm{a}^{\mathrm{m}}, \mathrm{b}^{\mathrm{m}} \mathrm{c} \mathrm{a}^{\mathrm{n}} \mathrm{b}^{\mathrm{n}}$ is regular.

L1 is recursive and L2, L3 are recursively enumerable, So L1 $\cap$ L3 and L2 $\cup$ L3 can recursively enumerable and also L2 - L1 can recursively enumerable. But we can't say that L1L3 is also recursively enumerable.

31. Ans. (d)

Since L1, L2, L3, L4 can be recognised by push down automata, so these all are context-free grammer.

$\Sigma^{*}-\mathrm{P}$ is the complement of P so it is always regular,
Since regular language are closed under complementation.
34. Ans. (a)

Lexical Analysis is implemented by finite automata
35. Ans. (b)

NPDA is more powerful than DPDA.
Hence answer is (b).
36. Ans. (b)
37. Ans. (a)

Options (b) and (c) will accept the string b
Option (d) will accept the string "bba"
Both are invalid strings.
So minized DFA is option a.
